FORMAT

3/3

checks passed

Top fixes, in order

- 1 Put the numbers behind the checkout API fix into an XYZ bullet.
- 2 Show that you led the monolith split, with the design and the result.
- 3 Replace the summary's filler with scale, domain and stack.

What happens next

1 · `/resume:analyse`

This report: every section scored, questions for each weak bullet.

2 · `/resume:improve`

Answer the questions one bullet at a time. Claude rewrites each one with you.

3 · `/resume:skills`

Tailor skills to a job description or the market. Unlocks after the bullets.

4 · `/resume:summary`

Write the summary last, from the finished resume.

5 · `/resume:build`

Final LaTeX resume and PDF, 2 pages max.

How a hiring rubric reads this resume

Scored against the Senior Software Engineer position rubric, the same shape of rubric an automated screen or a hiring manager applies. Only what the resume shows counts.

Production Impact & Ownership weight 35

19

of 35

Owns the checkout API at Acme Payments, but only one bullet has a measured outcome; the Globex onboarding API has no scale or result.

System Design & Scale weight 25

14

of 25

Worked on splitting the billing monolith into services, but the design decisions and results aren't described.

Technical Leadership & Mentoring weight 20

9

of 20

Mentions mentoring with no team size or outcome.

Technical Depth & Breadth weight 20

15

of 20

Java, Spring Boot, Kafka, PostgreSQL and AWS all appear in real work, not just the skills list.

BONUS POINTS

+2

+1 LinkedIn, +1 GitHub linked.

DEDUCTIONS

0

None.

Key strengths

- ✓ Solid Java/Spring backend depth shown through work
- ✓ Payments domain experience
- ✓ Some ownership of a production API

Where to level up

- 1 Describe the design and outcome of the monolith split
- 2 Add scale (requests, users, services) to the API work
- 3 Give mentoring a team size and result

Professional summary 4 / 10

Results-driven Software Engineer with 6 years of experience delivering high-quality software solutions. Passionate about clean code, cloud, microservices, AI and DevOps.

✓	Title + years up front	'Software Engineer with 6 years'.
✗	A specific, unique fact	No scale, domain or result.
!	Real tools and keywords	'Cloud, microservices' but no Java, Spring or AWS.
✗	Claims backed by the resume	Nothing on AI anywhere else.
✗	No filler or objective	'Results-driven', 'passionate about'.
✓	Two sentences, ≤ 45 words	Two sentences, 24 words.

Answer these to rewrite it

1. Which role are you targeting next?
2. What's the one fact a recruiter should remember?

The rewrite will be two sentences, about 30–45 words, built only from facts the resume can back up. Not sure you want a summary? It's optional: you'll be asked before the build.

Experience bullets

Each bullet is scored 0–10 on Google's XYZ idea: *accomplished X, measured by Y, by doing Z*. Not every bullet should be XYZ. About a third get a number; the rest get their strength from scope, ownership, specific tech and outcomes in words.

Senior Backend Engineer – Acme Payments

Jan. 2023 – Present | London, UK

5 e1-b1

XYZ rewrite

Improved checkout API performance by fixing database queries

A real outcome, but no measure and a vague 'how'.

1. Latency before and after, roughly?
2. What was the fix: batching, caching, indexes?

4 e1-b2

Strong, no metric

Worked on splitting the billing monolith into microservices

'Worked on' hides ownership; no design or result.

1. Did you lead the design? How many services, on what (Kafka, REST)?
2. What did the split make possible?

3 e1-b3

Strong, no metric

Mentored junior engineers

No team size or outcome.

1. How many engineers, and anything you run (reviews, design sessions)?

Software Engineer – Globex Bank

Jun. 2019 – Dec. 2022 | Manchester, UK

7 e2-b1

Keep as is

Built the customer onboarding API in Java 17 and PostgreSQL, used by the web and mobile apps

Clear ownership, tech and users.

2 e2-b2

XYZ rewrite

Responsible for CI/CD pipelines

A duty; no change described.

1. What did you change in the pipeline?
2. Did failed deployments or build times improve?

2 e2-b3

Cut

Wrote documentation

Low signal.

Education 8.0 / 10

8 B.Sc. in Computer Science – University of Leeds

2015 – 2019 | Leeds, UK

Relevant and one line: right for 6 years of experience.

Skills 8 / 10

- Well grouped and relevant to backend roles.
- Every major tool also appears in a bullet, which backs it up.

Format checks

- | | |
|--|-----------------------------|
| ✓ Fits on one page | Half a page to spare. |
| ✓ Role – Company Date Location on one line | Consistent. |
| ✓ ATS-readable | Single column, no graphics. |

Method. Role fit uses a rubric adapted from HackerRank's open-source **hiring-agent**, with level-specific rubrics written by Amigoscode. Bullets and summary are scored against the Amigoscode resume rubric. Scores are directional: a re-run can move them by a point or two. **Fairness:** name, gender, age, nationality, school prestige, grades and location are ignored; only what was built, owned and shipped counts.
