
CV Review

A full review of Jane Doe's CV against the Senior Software Engineer role.

1. Where it stands

Reviewed on 2026-09-23 against the Senior Software Engineer position rubric.

Promising profile, not yet at the bar. Jane's CV scores **59 out of 100** for the role. The experience bullets average **3.8 out of 10**, with 1 of 6 already at 7 or above.

Area	Score	Read
Role fit	59 / 100	Promising profile, not yet at the bar.
Experience bullets	3.8 / 10 average	1 of 6 at 7 or above. Target is 7 or above for every kept bullet.
Summary	4 / 10	Optional. Written last, after bullets and skills.
Skills	8 / 10	Tailored to job descriptions after the bullets.
Education	8.0 / 10	
Format	3 of 3 checks pass	Page limit is 2.
Planned bullet mix	2 XYZ, 2 strong, 1 keep	0 merge, 1 cut. 40% of kept bullets get a metric.

Top fixes, in order

1. Put the numbers behind the checkout API fix into an XYZ bullet.
2. Show that you led the monolith split, with the design and the result.
3. Replace the summary's filler with scale, domain and stack.

2. How a hiring rubric reads it

Scored against the Senior Software Engineer position rubric, the same shape an automated screen or a hiring manager uses. Only what the resume shows counts.

Category	Score	Evidence
Production Impact & Ownership	19 / 35	Owns the checkout API at Acme Payments, but only one bullet has a measured outcome; the Globex onboarding API has no scale or result.
System Design & Scale	14 / 25	Worked on splitting the billing monolith into services, but the design decisions and results aren't described.
Technical Leadership & Mentoring	9 / 20	Mentions mentoring with no team size or outcome.
Technical Depth & Breadth	15 / 20	Java, Spring Boot, Kafka, PostgreSQL and AWS all appear in real work, not just the skills list.
Bonus	+2	+1 LinkedIn, +1 GitHub linked.
Deductions	0	None.
Total	59 / 100	

Key strengths

- Solid Java/Spring backend depth shown through work
- Payments domain experience
- Some ownership of a production API

Where to level up

1. Describe the design and outcome of the monolith split
2. Add scale (requests, users, services) to the API work
3. Give mentoring a team size and result

3. Experience bullets

How bullets are scored. Each bullet is scored 0 to 10 on Google's XYZ idea: accomplished X, measured by Y, by doing Z. Not every bullet should be XYZ. About a third get a real number; the rest get their strength from scope, ownership, specific tech and outcomes in words. This plan has **40% XYZ**, which is a good balance.

Answer the questions under each bullet in **/resume:improve**. Rough answers are fine, and "don't know" is a fine answer. No number is ever invented.

Senior Backend Engineer, Acme Payments

Jan. 2023 to Present London, UK			
ID	Bullet, why, and questions	Score	Plan
e1-b1	Improved checkout API performance by fixing database queries A real outcome, but no measure and a vague 'how'. 1. Latency before and after, roughly? 2. What was the fix: batching, caching, indexes?	5	XYZ rewrite
e1-b2	Worked on splitting the billing monolith into microservices 'Worked on' hides ownership; no design or result. 1. Did you lead the design? How many services, on what (Kafka, REST)? 2. What did the split make possible?	4	Strong, no metric
e1-b3	Mentored junior engineers No team size or outcome. 1. How many engineers, and anything you run (reviews, design sessions)?	3	Strong, no metric

Software Engineer, Globex Bank

Jun. 2019 to Dec. 2022 Manchester, UK			
ID	Bullet, why, and questions	Score	Plan
e2-b1	Built the customer onboarding API in Java 17 and PostgreSQL, used by the web and mobile apps Clear ownership, tech and users.	7	Keep as is
e2-b2	Responsible for CI/CD pipelines A duty; no change described. 1. What did you change in the pipeline? 2. Did failed deployments or build times improve?	2	XYZ rewrite
e2-b3	Wrote documentation Low signal.	2	Cut

4. Professional summary

A summary is optional, and you will be asked whether you want one. If you do, it is written last in **/resume:summary**, after the bullets and skills, so it describes the finished resume.

Current summary, 4 / 10

Results-driven Software Engineer with 6 years of experience delivering high-quality software solutions. Passionate about clean code, cloud, microservices, AI and DevOps.

#	Check	Verdict	Note
1	Title + years up front	Pass	'Software Engineer with 6 years'.
2	A specific, unique fact	Fail	No scale, domain or result.
3	Real tools and keywords	Needs work	'Cloud, microservices' but no Java, Spring or AWS.
4	Claims backed by the resume	Fail	Nothing on AI anywhere else.
5	No filler or objective	Fail	'Results-driven', 'passionate about'.
6	Two sentences, ≤ 45 words	Pass	Two sentences, 24 words.

Questions for later

1. Which role are you targeting next?
2. What's the one fact a recruiter should remember?

5. Skills and education

Skills, 8 / 10

Languages: Java, SQL, Python, Bash

Frameworks: Spring Boot, Spring Security, Hibernate/JPA, JUnit, Testcontainers

Infrastructure: AWS, Docker, Kubernetes, Kafka, PostgreSQL, Redis, GitHub Actions

- Well grouped and relevant to backend roles.

- Every major tool also appears in a bullet, which backs it up.

Skills are tailored after the bullets, in **/resume:skills**, against a job description you paste or current postings for your target role.

Education, 8.0 / 10

B.Sc. in Computer Science, University of Leeds

2015 to 2019 | Leeds, UK

- Relevant and one line: right for 6 years of experience.

6. Format checks

#	Check	Verdict	Note
1	2 pages or fewer	Pass	One page, with room to spare.
2	Role, Company Date Location on one line	Pass	Consistent.
3	ATS-readable	Pass	Single column, no graphics.

7. Next steps

	Task	Command
☐	Answer the bullet questions, one bullet at a time	<code>/resume:improve</code>
☐	Tailor the skills to a job description or the market, once the bullets are done	<code>/resume:skills</code>
☐	Decide on a summary and write it last, once the skills are done	<code>/resume:summary</code>
☐	Build the final LaTeX resume and PDF, 2 pages max	<code>/resume:build</code>

Method. Role fit uses a rubric adapted from HackerRank's open source hiring-agent, with level specific rubrics written by Amigoscode. Bullets and summary are scored against the Amigoscode resume rubric. Scores are directional: a re-run can move them by a point or two. Name, gender, age, nationality, school prestige, grades and location are ignored; only what was built, owned and shipped counts.
